PROJECT WORK

IOT-BASED SMART MEDICINE DISPENSER: A TECHNOLOGICAL SOLUTION FOR MEDICATION

About the project

The Smart Medicine Dispenser is an innovative healthcare solution designed to help individuals take their medication on time and in the correct dosage. Many patients, especially the elderly and those with chronic illnesses, often forget to take their prescribed medicines or struggle with complex medication schedules. This system aims to solve this problem by automating the dispensing process while providing Alerts and notifications remind users through sound, or mobile alerts, ensuring they never miss a dose and Additionally, medication inventory management tracks medicine levels and notifies users when refills are needed .The dispenser ensures medication adherence, reducing the risk of missed or incorrect doses.
